Aspen EFD-1000 Pro Installation

December 2008

Southeast Aerospace is pleased to announce its first Aspen EFD-1000 Pro system installation.

The Electronic HSI system was installed in a Beechcraft Bonanza A36. The display was interfaced to an Apollo GX55 GPS, Collins VIR-351 NAV receiver, and a Century III Autopilot. Several transformers were required to interface to the autopilot.

Key benefits with the EFD-1000 Pro are the thirty minutes of battery backup, internal backup GPS which retains the primary GPS flight plan in an emergency and excellent sunlight readability.

In addition to the Aspen system installation, the previous ELT antenna was replaced with an Artex whip antenna.

For more detailed information regarding this Beechcraft Bonanza installation, please contact Rob Reed of SEA's Install Team at reed@seaerospace.com or call 321-255-9877 ext. 228.
