Beech King Air 350 Modification

Southeast Aerospace (SEA) recently completed modifications to a Beech King Air 350 that was purchased by a local government agency. SEA removed two existing mission racks and replaced them with a single SEA designed, light-weight Workstation. The Workstation interfaced with existing MX-15 Camera and Avalex Monitor System.

A Harris M7300 Tactical Transceiver System was installed with two controllers. One controller was installed in the cockpit, and the other on the Workstation. The existing Interphone system was modified to allow for the Pilot, Co-Pilot and Workstation Technician to communicate, as well as monitor and transmit on the Harris Tactical Transceiver.

In addition, the customer delivered the aircraft to SEA with essentially no interior. A newly refurbished interior was installed; bringing the King Air's lighting and interior back to OEM configuration.
