## Bell 206B Installation

Southeast Aerospace is pleased to announce the completion of a Glass Cockpit avionics retrofit into the Bell 206B helicopter. This complete installation included the addition of the new 2-Tube Chelton FlightLogic EFIS. This EFIS system added glass cockpit technology for the PFD and MFD. A new dimension of hazard awareness was added with Chelton's Highway-In-The-Sky display and Terrain display. During this coordinated project, other advanced capabilities and features were integrated by the inclusion of the Garmin GNS-530, GTX-330, and PMA-7000CD.

A complete audio/intercom system retrofit was also completed while 5 Bose headsets were integrated as well. A new instrument panel was fabricated along with extensive reworking of all the panels and center pedestal.

For a complete breakdown and summary of this installation project, please contact the Installation Team at Southeast Aerospace.
